

# Ignision and Ion system requirements

The current requirements for the server are:

1 Logical Core per active user session, a physical core contains 2 logical cores so a Mac with 6 cores would have 12 logical cores.

512MB of Memory per active user session (not including the memory needed for the applications).

2GB of Memory for the operating system without any active user sessions.

## **The release requirements for the server are:**

1 to 4 active users per logical core, this varies depending on how much streaming is being done. If the users are not streaming video then number is closer to 4, if the users are streaming video then the number is closer to 1.

384MB (1/3 GB) of Memory per active user session (not including the memory needed for the applications).

2GB of Memory for the operating system without any active user sessions.

## **The release requirements for the Ion client are:**

2 Logical Cores with at least an Intel Core2 class CPU (or AMD equivalent) at 1.0Ghz per logical core for Windows, Mac and Linux.

384MB (1/3 GB) of Memory for Windows, Mac and Linux.

100MB of Storage for Windows, Mac and Linux.

Windows XP or newer / Mac OS X 10.6 or newer / Ubuntu 14.04 LTS or newer

2 Logical Cores with at least ARM7 with floating point class CPU at 1.2Ghz per logical core for Android or iOS.

512MB (1/2 GB) of Memory for Android or iOS.

256MB of Storage for Android or iOS.

Android 4.1 or newer / iOS 8 or newer
